Joomla Seach Engine Patch

The sef patch extended version is a full Joomla component that extends the standard free SEF Patch.With the SEF patch extended version you will have **full control** over the META tags and other settings in regards of **search engine optimalisation** with Joomla. It's easy to install and easy to get full control over your META tags and other tags within the html head section in relation to Joomla content and menu items.

Joomla Caching Engine

Standard out of the box Joomla frontend generates dynamicly webpages on the user request. This means that for each request the specific page must be composed by excecuting PHP code and SQL queries. On normal "hosting" environment the generation of a Joomla pages can take up to 0,4 - 1,4 seconds depending on the hosting environment and the number of components used. For large volume visitor sites this can result into slow performance of the website. When enabled this component can "generates" pages within 0,02 - 0,001 seconds (depending on your hosting environment). **This is 20 to 1400 times faster!** If you want to boost your performance of your Joomla website this component can help you.

PHP Development Studio Pro

PHP Development Studio Pro is a PHP development environment. It is based on Eclipse and PHPEclipse and **fully preconfigured**. It comes with a compleet installed and configured Joomla version. This installation can be used locally on you computer.

PHP Development Studio Pro offers a user friendly environment for beginning and professional php developers.

JoomlAtWork

Joomla PrettyPDF

Out of the box Joomla frontend is able to dynamically generate a pdf-file of the content item shown. This, however, is not really presentative for your business because it lacks your housestyle items like font, colors, templates and logos.

Now PrettyPDF comes to the rescue and more! PrettyPDF offers you control of fonts, colors, housestyle templates and allows you to even add promotional material to the generated pdf-file.
